SKF Wheel bearing design evolution

OE Nb: 77 01 204 667

SKF has developed and applied a different design to the sealing and the flange design for the SKF Wheel bearing VKBA 968. This design evolution has been thoroughly tested and performance is full in line with OE requirements.

Although the new design is visually different to the previous design (SKF double-lip seal instead of axial lip and hub shape with more machined surfaces), they are fully interchangeable and does not need any specific mounting instructions. In addition, the SKF double-lip seal design will provide a better sealing performance.

Alternative bearing version with axial seal lip

SKF basic bearing with double-lip seal
