Self-aligning release bearing

Axially moving thrust ring

Vehicle manufacturer: BMW

For current listing refer to parts catalog

A number of different BMW cars have self-aligning release bearings with moving thrust rings. These can be made of plastic (Fig. 1) or metal (Fig. 2).

The thrust rings can be displaced axially by hand. This is necessary for technical reasons and does not constitute any defect

Caution:

The thrust ring and housing of the release bearing must not be greased, because this can cause the clutch to malfunction.

Fig. 1: Release bearing with axially moving thrust ring made of plastic

Fig. 2: Release bearing with axially moving thrust ring made of metal

Please observe the vehicle manufacturer specifications!
