

Volvo 850 / C70 I / S70 / V70

Item no. 3151 269 332

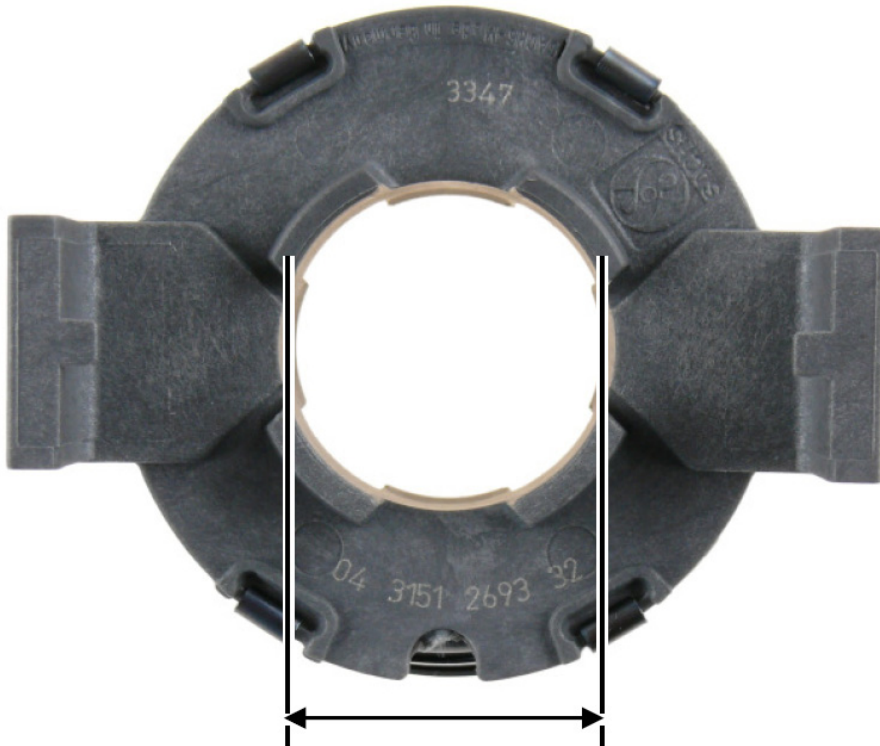

Fig. 1: Clutch release bearing

The profile of the guide tube is tapered. The diameter is largest on the engine-side end of the guide tube. The inside diameter of the clutch release bearing is 0.2 mm less than on the previous version of the clutch release bearing (item no. 3151 216 031).

- ➔ Less clearance between the clutch release bearing and the guide tube.
- ➔ Vibration noise minimized.

The clutch release bearing may not slide smoothly on the guide tube during assembly. This has no negative effect in the running area of the clutch release bearing.
