

# No more leaks: With MEYLE HD water pumps against the workshop frustration!

**MEYLE offers a wide range of MEYLE HD water pumps for numerous vehicle applications. With a total of 28 products, almost 58 million vehicles can be covered worldwide. Here, independent workshops benefit from the many advantages of the SiC/SiC mechanical seals used in MEYLE water pumps. MEYLE also offers a 4-year warranty on MEYLE HD products and a 100,000 mile warranty on all MEYLE water pumps.<sup>1</sup>**

A defective water pump can quickly lead to engine damage and cause a lot of trouble in the workshop. This can be effectively prevented with the MEYLE HD water pumps: They are equipped with an extremely wear-resistant mechanical seal with SiC/SiC sliding pairing – in OEM quality. The type of seal used in MEYLE water pumps is particularly resistant to abrasive substances. In addition, a water pump bearing, also in OEM quality, and a high-temperature resistant housing seal ensure a longer service life for MEYLE HD water pumps.

The MEYLE HD water pumps convince with well thought-out components, which are optimally adapted to the individual operating conditions. For example, the water pump bearing, which is equipped with a 4-point ball roller

bearing or an angular contact ball bearing depending on the load cases.

When replacing the water pump, the complete cooling system must always be thoroughly flushed and then filled with new coolant. Only if the cooling circuit is flushed before the water pump is installed does the additional 100,000 mile guarantee MEYLE gives on these products apply to MEYLE water pumps. MEYLE supports this with the new MEYLE ORIGINAL cooling circuit flushing device [MEYLE no. 999 990 0002].
