

Available exclusively from MEYLE: New oil change kits complete with sealing sleeve and wiring harness plug socket.

to fit BMW | Jaguar | Land Rover (ZF 6HP)

Experts recommend that the sealing sleeve and plug socket always be replaced when doing an automatic transmission oil change. The O-rings can lose their sealing capability causing premature leakage from the transmission.

As of now, MEYLE offers two repair-friendly oil change kits complete with sealing sleeve and wiring harness plug socket to guarantee hassle-free transmission oil change:

- MEYLE no.: 300 135 1004, Short no.: MOK0034
- MEYLE no.: 300 135 1005, Short no.: MOK0035

Supplied in a sturdy cardboard case, both kits come with a full set of accessory parts required for allround transmission oil change:

- Filters
- Seals
- Bolts
- Drain/intake plug

- Sealing sleeve and wiring harness plug socket assembly
- New for-life self-cleaning magnets
- 7 litres of ATF transmission fluid

For vehicles with a mileage exceeding 60,000 km MEYLE's engineers recommend that the transmission fluid and filters be changed along with the respective components to maximise gearbox performance and service life. Advice: Don't miss this opportunity at the next scheduled service.

On a side note:

The sealing sleeve and wiring harness plug socket are also available separately (MEYLE no. 300 930 0001/S, Short no.: MEX0484), complemented by multi-purpose high-performance fluids suitable for manual and automatic transmissions.

Enhance customer service with MEYLE oil change kits!
