

Opel Astra series G - Using JAR957 & JAR997

In addition to JAR957 (as series), TRW has included a new part number in the tie rods programme. Now, a special tie rod is available to limit the steering range, the JAR997. It is designed to prevent wide-section tyres from rubbing in the wheel housing.

OES references: JAR957 = Opel-no: 16 03 003, GM-no.: 9196409
 JAR997 = Opel-no: 16 03 216, GM-no.: 9118128

JAR957 - Standard steering limit as series

JAR997 - Track rod with steering limit for wide-section tyres

Caution: When converting to wide-section tyres, prevent the wheels or any other parts connected to the suspension strut from touching the body. Additionally, check the steering geometry after installation and adjust if necessary.
