

To Fit:

MAN L2000, TGL, TGM

Repl. no. 81.44205.6048

Quality “Made in Germany”

King Pin Sets from febi

The steering behavior of the vehicle can be negatively affected by numerous components of the chassis and steering system including, for example, a worn-out king pin.

Due to bad roads, overloading of the vehicle, or lack of lubrication, the king pin and the bearing can wear out and get too much play in the axle beam. The consequences are a constantly shifting track on the front axle and unintentional steering movements. In this case, the king pin and the bearing should be replaced immediately.

The king pin set febi 107122 contains a formerly patented bearing. It is a double row needle bearing in combination with a thrust bearing and an effective seal. This bearing is therefore virtually maintenance-free and achieves an extremely long service life even without relubrication.

As a result of the expiry of the patent, febi can offer the king pin sets febi 107122 and febi 107123 – which differ in design of the sealing ring – for a fair value repair for MAN L2000, TGL, and TGM in OE-matching quality.

febi king pins are manufactured precisely at the Ennepetal site in our own production facility. The high quality ensures problem-free installation, reliable function, and a long service life.
