

# febi 173282

To Fit:

Vehicles with 24 volt on-board voltage

## See and Be Seen with febi Bulbs

It's not just a legal necessity but a very important safety topic to have a proper lighting of the vehicle. The driver must see what is going on in the drive path and the other road users must be able to recognize vehicles in the dark.

Even if LED lights are more and more popular halogen bulbs are still the standard. Halogen bulbs have a certain lifetime depending on conditions like vibrations, temperature as well as production and material quality. This makes halogen bulbs a standard wear item on every vehicle.

The febi bulb range has been completely revised. Many bulbs are now available as standard and long-life versions, for example the 24V H7 bulb as a standard version under febi 173282 and the long-life version under febi 173287 with improved durability and longer lifetime.

In addition to headlight bulbs, febi offers a wide range of further conventional and halogen bulbs in OE matching quality for all common applications in the commercial vehicle sector.
