

TECHNICAL REPORT

Selection of the correct rocker
cover gasket for 14P, 15P &
TD5 engines for Land Rover

SCOPE

Indicate the **main differences** of rocker cover gaskets for 14P, 15P and TD5 engines of Land Rover, as well as the help for the **correct identification** of the gasket.

DESCRIPTION

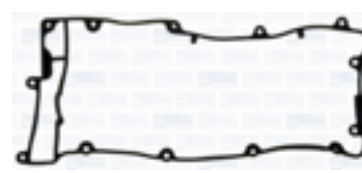

The engines of **Land Rover of 2945cc** were manufactured with two types of rocker cover gaskets very similar to each other, but with some modifications that makes them different and without the possibility of being exchanged. These references are: **11096500** and **11096600**.

The main difference between them is the **profile** and one shape form at the end of the gasket. Therefore, Ajusa has both references **differentiated by the engine number**.

11096500

Engine code: TD5
Engine number to: A622423
Engine code 14 P; 15 P
Engine number to: 1A622423

11096600

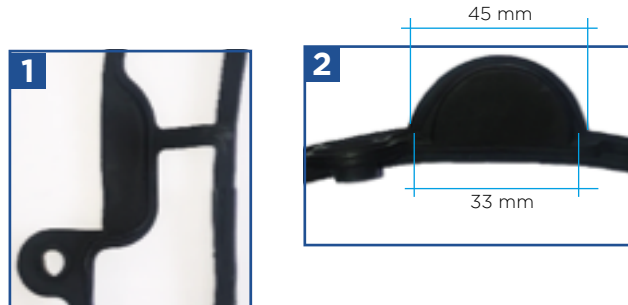

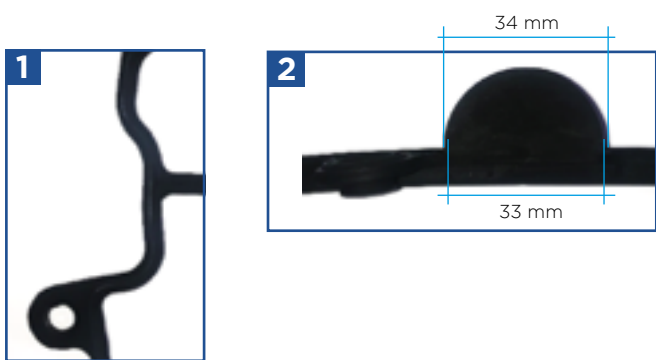

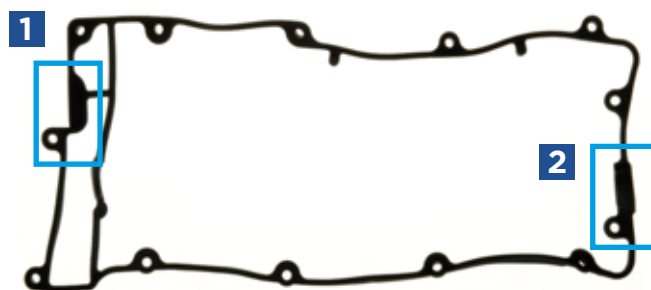

Engine code: TD5
Engine number to: A622424
Engine code: 14 P; 15 P
Engine number to: 1A622424

It is common to have lack of knowledge about the engine number which the vehicle belongs, so the objective of this tip is to **help our customers to be able to select the correct reference** based on the old one which was removed.

In the following images, both references are shown, indicating the **main differences between them**.

11096500

11096600

On the other hand, another possibility of identification is **by the VIN number of the vehicle** in the last 6 digits. In this case, these digits indicate the **sequence of the production line** of the vehicle which indicates the engine number.

ACCCDDDD1A XXXXXX

LAST 6 DIGITS OF VIN	REFERENCE	GASKET SHAPE
XXXXXXXX ≤ 622423	11096500	
XXXXXXXX > 622423	11096600
