

Technical Bulletin

Toyota Carina E – Front Lower Wishbone (Arm)

Applicable References: ADT38646, ADT38647, ADT386193, ADT386194

Applications: Toyota Carina E – All models EXCEPT GTi Version 1992>1997

Date Issued: 07/2002

Blue Print now stock a Lower Front Wishbone for the Toyota Carina E. This is suitable for all models with the exception of the GTi version.

Toyota build the Carina E in the UK and in Japan. The 17 character long Vehicle Identification Number (VIN), identifies where each model was built.

The UK built models start with SB1... and the Japanese built ones start with JT1...

For the UK built models there is a choice of Lower Wishbone. Blue Print's research has shown that the choice is purely visual, as there are no chassis ranges to aid identification. The visual difference is specific to the rear inner bush area of the Lower Wishbone, and the two variations are shown. (See pictures).
