TOYOTA/NISSAN - 54MM DEEP HUB NUT SOCKET

Blue Print's 54mm Deep Hub Nut Socket ADT35501 is required to allow loosening/tightening of the hub nut on a number of Toyota and Nissan vehicles, where the nut is situated deep inside the free-wheeling hub unit.

Depending on model, the following replacement Blue Print parts would require the front hub nut to be removed:

- Front Brake Discs
- Front CV Joints
- Front Wheel Bearings

Failure to use the correct tools and adhere to the correct instructions could result in incorrectly adjusted wheel bearings which in turn could result in premature bearing failure.
